

ValuSignal Cold Email — KPI Reference

What each metric means and how to read it · cumulative figures since launch (Apr 19, 2026) · as of Jun 30, 2026

KPI	What it means	How to read it / benchmark	ValuSignal now
Total Emails Sent	Every email delivered, including all follow-up steps.	Volume only — not a quality or performance metric.	44.8K since launch
Reply Rate (all replies)	% of contacts who replied with anything — positive, negative, opt-out, out-of-office, or auto-reply.	Deliverability signal only. ~2%+ means you're landing in the inbox. NOT a measure of interest.	2.13%
Total Replies (all)	Every reply received — positive, negative, opt-out, out-of-office and auto-replies combined.	The base for the two ratios below. 234 of these 390 replies were positive.	390
Opportunities (Positive Replies)	Replies showing genuine interest — the hand-raisers.	The outcome that actually matters.	234
Positive Reply Rate (Opp ÷ Contacts)	% of contacts who replied with interest.	THE real performance metric — use this as the headline instead of the all-reply rate.	1.28%
Positive Share of Replies (Opp ÷ Replies)	Of everyone who replied, the % that were interested.	Reply quality . = 234 ÷ 390. Target ≥ 25–30%. Higher = cleaner audience/copy.	60% 234 of 390
Bounce Rate	% of emails that couldn't be delivered (invalid or full inboxes).	Healthy ≤ 2%. High bounce hurts deliverability and risks spam flags.	12.39% too high
Open / Click Rate	Email opens and link clicks.	Tracking is disabled, so these are not available.	N/A

Bottom line: Instantly's default "Reply Rate" (2.13%) counts negatives, opt-outs and out-of-office replies, so it overstates performance. We received **390 total replies**, and **234 of them (60%) were positive** — above the 25–30% quality benchmark. Of everyone emailed, the real interest rate is the **Positive Reply Rate of 1.28%** (highlighted). The **12.39% bounce rate** is the one red flag to fix (healthy is ≤ 2%).
