

Appraisal Inbox - ValuSignal Overview

Speaker

Chase Pursley is the founder of Appraisal Inbox, The Operating System for Appraisers. Used by appraisal professionals since 2013, Appraisal Inbox helps independent appraisers, appraisal teams, production managers, and multi-office firms track orders, coordinate work, reduce double entry, and improve visibility across the assignment workflow.

Platform Overview

Appraisal Inbox helps appraisers manage the business workflow around appraisal assignments: order intake, scheduling, assignments, tasklists, client requirements, workfiles, communication, accounting, exports, and reporting.

It streamlines order intake with Portal Push, a browser plugin for lender/AMC portals, and Order Forward for order emails. It also exports data in multiple ways, including UAD 3.6 MISMO .zip, reducing repeated entry between intake, operations, and downstream appraisal tools.

Appraisal Inbox serves independent appraisers, appraisal practices, production and office managers, and enterprise or multi-office firms that need cleaner order visibility, deadline tracking, team coordination, workfile organization, fee/payment tracking, commission splits, reporting, and repeatable workflows.

Demo Focus

- **Faster intake:** Portal Push for lender/AMC portals and Order Forward for order emails.
- **Assignment workflow:** status, due dates, team roles, tasklists, workfiles, messages, and activity history in one order record.
- **Business visibility:** fees, invoices, payments, commissions, workload, turn times, and performance.
- **Export handoff:** flexible exports, including UAD 3.6 MISMO .zip, to reduce duplicate entry.

Session Details

Suggested title: Appraisal Inbox Demo: From Order Intake to UAD 3.6 Export

Format: 2-hour presentation/demo.

Suggested description: See how Appraisal Inbox helps appraisers capture assignment details faster, manage workflow, and export data, including UAD 3.6 MISMO .zip, with less double entry.

Suggested tags: Tech Demos, Technology & Tools, Business Growth, Production Efficiency, UAD 3.6
